Product: **Nanotol Mineral Surfaces Protector**

Location: Ontario, Canada

Object: Sealing of the sculptures „People and the City“ and „Navy Monument“

Nanotol Mineral Surfaces Protector was sprayed on the cleaned objects. The coating was completely networked and hardened after 24 hours. The monument was treated twice!

Professor Alexander Gabov, Conservation of Sculptures Monuments and Objects:

„Our research conducted on CeNano Portol Pro Sealant found the nano-silica coating to be an excellent protective coating option for the „People and the City“ artwork. The research included product characterization to ensure the coating's purity; water repellency and water vapor permeability tests; color and morphology tests to investigate any change in the aesthetic appearance of coated stone; and empirical tests to evaluate the ease of cleaning graffiti from the stone surface and coating removability.

CeNano Portol Pro Sealant was selected, approved and applied to the entire stone foundation by CSMO in September 2012“
