Product: Nanotol Textile Protector

Location: Netherlands

Object: Tent

Maharadja Tenten offers a wide range of exclusive and colorful tents for weddings, parties and f.e. exhibitions. In September 2012 Maharadja Tenten treated an exclusive tent with Nanotol Textile Protector.

M. de Jonge, director of Maharadja Tenten: „During the last years we have tried several products to protect our tents, because we were faced with several problems such as soot stains caused by firework or open fires close to our tents, or mud spots. These stains were not removable so far.

In 2012 we decided to test Nanotol Textile Protector on our tents. Lucky for us and our customers: we were more than satisfied! Although we warned our customer, they set up an open fire in front of the tent. On the roof of the tent were lots of soot spots visible. Normally such spots attach to cotton and are not removable. A combination of moisture and spots can damage the fabric of the tent. However, due to the protection with Nanotol Textile Protector the spots did not attach to the cotton at all. Nanotol Textile Protector is a blessing for us because it created an invisible protective layer on the cotton tent.“
